

What Can I Do about Fatigue?

by NEWLIFEOUTLOOK TEAM

The Facts about Fatigue for Addiction

If you have fatigue, it might be because of the drugs or even alcohol you're taking. Stimulants such as methamphetamine and cocaine can cause you to stay up longer than you intend and the chemicals can continue to interrupt you during sleep. Sedatives will naturally fatigue you, since that is what they are supposed to do. Alcohol starts off as a stimulant, which might make you feel high in energy but it becomes a depressive, which causes you to feel tired. To get help for a substance abuse problem, tell someone right away. If you think you might have a problem, chances are you do. You should seek help immediately. You can get started by telling a friend or a doctor that you think you might have a problem.

Just Being Tired
Fake or Imagined

Fatigue Can Affect:

• Your mood	• Cognitive performance
• Physical function	• School work
• Work performance	• Community activities
• Social interaction	• Sense of self
• Family care	• Your appetite

Measuring Fatigue

The **Fatigue Severity Scale (FSS)** is a self-reported questionnaire used to measure your fatigue. It consists of ...

NINE Questions, each rated on a scale of 1-7

To score the Fatigue Severity Scale either add all items together (this will range from 9-63) or find the mean by adding your items together and dividing by 9 (this will range from 1-9).

In either case, the **higher the number you calculate is, the more fatigued you are.**

Tips for Reducing Fatigue

- Quantity & Quality of Sleep**
 - ✓ Have a regular bed time and wake up time
 - ✓ Use your bed just for sleeping
 - ✓ Do quiet activities if you're not sleepy
 - ✓ Room should be dark and quiet
